

AI Solution Validation & Optimisation

Validate Your AI Investment. Maximize Your Impact.

You invested significant time and resources into building an AI project. Now, the key question is: **Is it truly ready?** Is it performing as expected, is it secure, and is it delivering tangible business value?

Our AI Solution Validation service provides an objective, expert-led audit to answer these critical questions. We help you move from project completion to confident, optimized deployment, ensuring your investment pays off.

How We Deliver

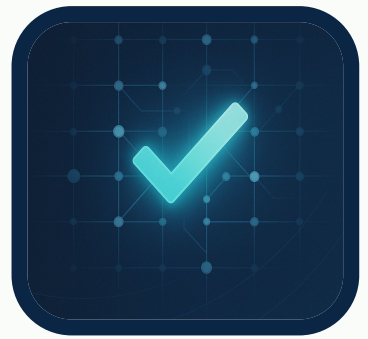

We are a boutique firm with deep, specialized expertise in AI. We provide a fresh, unbiased perspective on your project's health and potential, helping you identify blind spots and unlock new value. Our process is a concentrated, four-week sprint that delivers maximum insight, combining deep technical expertise with a business-first perspective.

A typical engagement is made up of three modules:

Kick-off & Discovery (Week 1)	We meet with your core team to understand your project's goals, technical architecture, and validation criteria. We set up access to your models and other relevant data & infrastructure.
Validation & Analysis (Weeks 2-3)	Our team conducts a multi-faceted analysis, including: ◦ Performance Metrics Audit: Is the model meeting its performance KPIs (accuracy, latency, throughput)? ◦ Cost & Efficiency Review: Is the model operating within budget, and can it be made more efficient? ◦ Safety & Ethics Audit: We test for potential biases, unintended outputs, and security vulnerabilities. ◦ Business Impact Assessment: We link the model's performance directly to its expected business outcomes.
Recommendations & Roadmap (Week 4)	We present a comprehensive report with our findings, highlighting areas of strength and identifying specific opportunities for improvement. We'll provide a clear, prioritized roadmap for optimization.

What you will get

- **Validation Report:** A detailed document covering performance, cost, and safety audits.
- **Prioritized Action Plan:** A clear, actionable roadmap with steps to optimize your model and mitigate risks.
- **Executive Summary:** A high-level overview for leadership, translating technical findings into business impact.
- **12vectors "Seal of Approval":** A formal sign-off report that can be used to communicate the project's readiness to internal stakeholders.

AI Consulting

Suitable For:

Organisations that have:

- Completed a new AI or LLM project with a model in a pre-production or early-stage production environment.
- A core team in place: A data scientist or engineer who can provide access and information.
- Specific business goals for the model (e.g., improve customer service, automate a process).
